# Lecture 03 - Select

## Jan 25

```
Select [ Projected Columns ]
From Table ...
     join to ...
Where ...
Group By Column List
Having [ where on grouped data ]
Ordr By [ Columns ]
```

Let's use our table from last time

```
 1: -- \c l02
 2: create table vote_by_county (
 3:     id              serial primary key,
 4:     year            int default 2021,
 5:     state           text default '--',      -- irritatingly all upper case.
 6:     state_uc        text default '--',
 7:     state_po        varchar(2) default '--',   -- Incorrectly Named Column!
 8:     county_name       text default '--',       -- irritatingly all upper case.
 9:     county_name_uc    text default '--',
10:     county_fips       int default 0,
11:     office          text default 'unk',
12:     candidate       text default 'unk',
13:     candidate_uc    text default 'unk',
14:     party           text default 'unk',
15:     candidatevotes    int default 0,
16:     totalvotes        int default 0,
17:     version            int,
18:     vote_mode        text
19: );
```

and do some selects with the projected columns.

```
select id, year
 from vote_by_county
;
```

we can rename a column

```
select id, year as "Year of Our Lord"
 from vote_by_county
;
```

we can pick different columns

File: 01.sql

```
1:
2: select id, year, state, county_name as "county"
3:     from vote_by_county
4: ;
```

Output:

```
   id  | year |        state        |          county
-------+------+---------------------+-----------------------
    16 | 2000 | Alabama             | Bibb
  1992 | 2000 | Georgia             | Troup
  4932 | 2000 | Michigan            | Ingham
  5704 | 2000 | Mississippi         | Perry
 12884 | 2004 | Arkansas            | Pope
...
 72592 | 2020 | Wyoming             | Sheridan

 72615 | 2020 | Wyoming             | Weston
 72616 | 2020 | Wyoming             | Weston
 72617 | 2020 | Wyoming             | Weston
(72617 rows)
```

How about sorting the data

File: 02.sql

```
1: select id, year, state, county_name
2:     from vote_by_county
3:     order by county_name, state
4: ;
```

Output:

```
   id   | year |        state         |      county_name
-------+------+----------------------+----------------------
 28679 | 2008 | South Carolina       | Abbeville
 38030 | 2012 | South Carolina       | Abbeville
 38029 | 2012 | South Carolina       | Abbeville
 38028 | 2012 | South Carolina       | Abbeville
 28677 | 2008 | South Carolina       | Abbeville
  9148 | 2000 | South Carolina       | Abbeville
  9147 | 2000 | South Carolina       | Abbeville
  9146 | 2000 | South Carolina       | Abbeville
  9145 | 2000 | South Carolina       | Abbeville
 19328 | 2004 | South Carolina       | Abbeville
 19326 | 2004 | South Carolina       | Abbeville
 19327 | 2004 | South Carolina       | Abbeville
 28678 | 2008 | South Carolina       | Abbeville
 ...
 66634 | 2020 | Texas                | Zavala
 66635 | 2020 | Texas                | Zavala
 48759 | 2016 | Texas                | Zavala
 66633 | 2020 | Texas                | Zavala
 47714 | 2016 | South Dakota         | Ziebach
 69518 | 2020 | South Dakota         | Ziebach
 47713 | 2016 | South Dakota         | Ziebach
 47712 | 2016 | South Dakota         | Ziebach
 69516 | 2020 | South Dakota         | Ziebach
 69517 | 2020 | South Dakota         | Ziebach
 38362 | 2012 | South Dakota         | Ziebach
 38363 | 2012 | South Dakota         | Ziebach
 29012 | 2008 | South Dakota         | Ziebach
  9589 | 2000 | South Dakota         | Ziebach
 29011 | 2008 | South Dakota         | Ziebach
 29010 | 2008 | South Dakota         | Ziebach
 19661 | 2004 | South Dakota         | Ziebach
 19660 | 2004 | South Dakota         | Ziebach
  9590 | 2000 | South Dakota         | Ziebach
 19659 | 2004 | South Dakota         | Ziebach
  9591 | 2000 | South Dakota         | Ziebach
 38361 | 2012 | South Dakota         | Ziebach
  9592 | 2000 | South Dakota         | Ziebach
(72617 rows)
```

you can only sort by the columns that you have in the *projected columns*.

you can use the column position

File: 03.sql

```
1: select id, year, state, county_name
2:     from vote_by_county
3:     order by 4, 3
4: ;
```

Output:

```
    id   | year |        state         |      county_name
  -------+------+----------------------+----------------------
  28679 | 2008 | South Carolina       | Abbeville
  38030 | 2012 | South Carolina       | Abbeville
  38029 | 2012 | South Carolina       | Abbeville
  38028 | 2012 | South Carolina       | Abbeville
  28677 | 2008 | South Carolina       | Abbeville
   9148 | 2000 | South Carolina       | Abbeville
   9147 | 2000 | South Carolina       | Abbeville
   9146 | 2000 | South Carolina       | Abbeville
   9145 | 2000 | South Carolina       | Abbeville
  19328 | 2004 | South Carolina       | Abbeville
  19326 | 2004 | South Carolina       | Abbeville
  19327 | 2004 | South Carolina       | Abbeville
  28678 | 2008 | South Carolina       | Abbeville
  47379 | 2016 | South Carolina       | Abbeville
  ...
  38362 | 2012 | South Dakota         | Ziebach
  38363 | 2012 | South Dakota         | Ziebach
  29012 | 2008 | South Dakota         | Ziebach
   9589 | 2000 | South Dakota         | Ziebach
  29011 | 2008 | South Dakota         | Ziebach
  29010 | 2008 | South Dakota         | Ziebach
  19661 | 2004 | South Dakota         | Ziebach
  19660 | 2004 | South Dakota         | Ziebach
   9590 | 2000 | South Dakota         | Ziebach
  19659 | 2004 | South Dakota         | Ziebach
   9591 | 2000 | South Dakota         | Ziebach
  38361 | 2012 | South Dakota         | Ziebach
   9592 | 2000 | South Dakota         | Ziebach
  (72617 rows)
```

you can ascending or descending sort

File: 04.sql

```
1: select id, year, state, county_name
2:     from vote_by_county
3:     order by 4 desc, 3 asc
4: ;
```

Output:

```
    id   | year |        state         |      county_name
  -------+------+----------------------+----------------------
   9591 | 2000 | South Dakota         | Ziebach
  19659 | 2004 | South Dakota         | Ziebach
  19660 | 2004 | South Dakota         | Ziebach
  19661 | 2004 | South Dakota         | Ziebach

19327 | 2004 | South Carolina      | Abbeville
(72617 rows)
```

You can apply functions and operators to the columns. In this case I will add 10 to the year and concatenate, `||` the state and county.

File: 05.sql

```
1: select id, year + 10 as "x", state||', '||county_name as "Location"
2:     from vote_by_county
3:     order by 3
4: ;
```

Output:

```
  id  |  x   |                 Location
-------+------+-----------------------------------------
31169 | 2022 | Alabama, Autauga
31168 | 2022 | Alabama, Autauga
31167 | 2022 | Alabama, Autauga
    1 | 2010 | Alabama, Autauga
21818 | 2018 | Alabama, Autauga
21817 | 2018 | Alabama, Autauga
21816 | 2018 | Alabama, Autauga
12465 | 2014 | Alabama, Autauga
12466 | 2014 | Alabama, Autauga
12467 | 2014 | Alabama, Autauga
    4 | 2010 | Alabama, Autauga
    3 | 2010 | Alabama, Autauga
    2 | 2010 | Alabama, Autauga
40519 | 2026 | Alabama, Autauga
50527 | 2030 | Alabama, Autauga
40518 | 2026 | Alabama, Autauga
50525 | 2030 | Alabama, Autauga
...
```

```

(72617 rows)
```

Single quotes denote string constants. Double quotes denote things like tables and column names. If you want an upper-lower case or a table name or column name with blanks then you have to quote it with double quotes.

Lot's of stuff will fail if you put blanks in your table names. This is worse than putting blanks in your file names. Python will crash with blanks in file names.

We will be using more than one table in queries. To do this we need to tell SQL the table. That is done with a table-alias. In this case *t1*.

File: 06.sql

```
1: select t1.id, t1.year + 10 as "x", t1.state||', '||t1.county_name as "Location"
2:     from vote_by_county  as t1
3:     order by 3 asc
4: ;
```

There are lots of builtin functions that you can use and all sorts of arithmetic operators in PostgreSQL that can be applied to the projected columns. You can also write your own functions and pass data from the projected columns to the function and get back results.

Languages for functions include PG/SQL - the built in PostgreSQL language and others like JavaScript, Lua, C, C++, Go etc. I use PG/SQL and C for processing. JavaScript is 5 to 10x slower than PG/SQL. C is 10x faster than PG/SQL. These are rough numbers. I am a big fan of Go but I haven't used it for stored-procedure/functions yet in PostgreSQL.

Using a C function requires re-loading and re-starting the database - so it is hard.

Get the list of all of the candidates in the data.

```
 1:
 2: -- Find the set of counties that voted for "Sleepy Joe" in 2020
 3:
 4: select t1.state, t1.county_name
 5: from vote_by_county as t1
 6: where t1.year = 2020
 7:     and t1.candidate = 'Joe Biden'
 8: order by state, county_name
 9:
10:
11:
```

Find out what counties where voted in:

The question is who won? To find that we have to find the candidate that had the most votes in each county. We need to use the "max" in a county.

## Operators

https://www.postgresql.org/docs/9.0/functions.html

There are lots!

| Operator | Description | Example | Result |
|---|---|---|---|
| + | addition | 2 + 3 | 5 |
| – | subtraction | 2 – 3 | –1 |

| Operator | Description | Example | Result |
|---|---|---|---|
| `*` | multiplication | `2 * 3` | `6` |
| `/` | division (integer division truncates the result) | `4 / 2` | `2` |
| `%` | modulo (remainder) | `5 % 4` | `1` |
| `^` | exponentiation | `2.0 ^ 3.0` | `8` |
| `|/` | square root | `|/ 25.0` | `5` |
| `||/` | cube root | `||/ 27.0` | `3` |
| `!` | factorial | `5 !` | `120` |
| `!!` | factorial (prefix operator) | `!! 5` | `120` |
| `@` | absolute value | `@ -5.0` | `5` |
| `&` | bitwise AND | `91 & 15` | `11` |
| `|` | bitwise OR | `32 | 3` | `35` |
| `#` | bitwise XOR | `17 # 5` | `20` |
| `~` | bitwise NOT | `~1` | `-2` |
| `<<` | bitwise shift left | `1 << 4` | `16` |
| `>>` | bitwise shift right | `8 >> 2` | `2` |

and string operations

| Function | Return Type | Description | Example | Result |
|---|---|---|---|---|
| `string || string` | `text` | String concatenation | `'Post' || 'greSQL'` | `PostgreSQL` |
| `string || non-string` or `non-string || string` | `text` | String concatenation with one non-string input | `'Value: ' || 42` | `Value: 42` |
| `bit_length(string)` | `int` | Number of bits in string | `bit_length('jose')` | `32` |
| `char_length(string)` or `character_length(string)` | `int` | Number of characters in string | `char_length('jose')` | `4` |
| `lower(string)` | `text` | Convert string to lower case | `lower('TOM')` | `tom` |
| `octet_length(string)` | `int` | Number of bytes in string | `octet_length('jose')` | `4` |
| `overlay(string placing string from int [for int])` | `text` | Replace substring | `overlay('Txxxxas' placing 'hom' from 2 for 4)` | `Thomas` |
| `position(substring in string)` | `int` | Location of specified substring | `position('om' in 'Thomas')` | `3` |
| `substring(string [from int] [for int])` | `text` | Extract substring | `substring('Thomas' from 2 for 3)` | `hom` |

| Function | Return Type | Description | Example | Result |
|---|---|---|---|---|
| `substring(string from pattern)` | `text` | Extract substring matching POSIX regular expression. See Section 9.7 for more information on pattern matching. | `substring('Thomas' from '...$')` | `mas` |
| `substring(string from pattern for escape)` | `text` | Extract substring matching SQL regular expression. See Section 9.7 for more information on pattern matching. | `substring('Thomas' from '%#"o_a#"_' for '#')` | `oma` |
| `trim([leading | trailing | both] [characters] from string)` | `text` | Remove the longest string containing only the characters (a space by default) from the start/end/both ends of the `string` | `trim(both 'x' from 'xTomxx')` | `Tom` |
| `upper(string)` | `text` | Convert string to upper case | `upper('tom')` | `TOM` |

## Base Functions

| Function | Return Type | Description | Example | Result |
|---|---|---|---|---|
| `abs(x)` | (same as input) | absolute value | `abs(-17.4)` | `17.4` |
| `cbrt(dp)` | `dp` | cube root | `cbrt(27.0)` | `3` |
| `ceil(dp or numeric)` | (same as input) | smallest integer not less than argument | `ceil(-42.8)` | `-42` |
| `ceiling(dp or numeric)` | (same as input) | smallest integer not less than argument (alias for `ceil`) | `ceiling(-95.3)` | `-95` |
| `degrees(dp)` | `dp` | radians to degrees | `degrees(0.5)` | `28.6478897565412` |
| `div(y numeric, x numeric)` | `numeric` | integer quotient of y/x | `div(9,4)` | `2` |
| `exp(dp or numeric)` | (same as input) | exponential | `exp(1.0)` | `2.71828182845905` |
| `floor(dp or numeric)` | (same as input) | largest integer not greater than argument | `floor(-42.8)` | `-43` |
| `ln(dp or numeric)` | (same as input) | natural logarithm | `ln(2.0)` | `0.693147180559945` |
| `log(dp or numeric)` | (same as input) | base 10 logarithm | `log(100.0)` | `2` |
| `log(b numeric, x numeric)` | `numeric` | logarithm to base b | `log(2.0, 64.0)` | `6.0000000000` |
| `mod(y, x)` | (same as argument types) | remainder of y/x | `mod(9,4)` | `1` |

| Function | Return Type | Description | Example | Result |
|---|---|---|---|---|
| `pi()` | dp | "π" constant | `pi()` | 3.14159265358979 |
| `power(a dp, b dp)` | dp | a raised to the power of b | `power(9.0, 3.0)` | 729 |
| `power(a numeric, b numeric)` | numeric | a raised to the power of b | `power(9.0, 3.0)` | 729 |
| `radians(dp)` | dp | degrees to radians | `radians(45.0)` | 0.785398163397448 |
| `round(dp or numeric)` | (same as input) | round to nearest integer | `round(42.4)` | 42 |
| `round(v numeric, s int)` | numeric | round to s decimal places | `round(42.4382, 2)` | 42.44 |
| `sign(dp or numeric)` | (same as input) | sign of the argument (-1, 0, +1) | `sign(-8.4)` | -1 |
| `sqrt(dp or numeric)` | (same as input) | square root | `sqrt(2.0)` | 1.4142135623731 |
| `trunc(dp or numeric)` | (same as input) | truncate toward zero | `trunc(42.8)` | 42 |
| `trunc(v numeric, s int)` | numeric | truncate to s decimal places | `trunc(42.4382, 2)` | 42.43 |
| `width_bucket(op numeric, b1 numeric, b2 numeric, count int)` | int | return the bucket to which operand would be assigned in an equidepth histogram with `count` buckets, in the range `b1` to `b2` | `width_bucket(5.35, 0.024, 10.06, 5)` | 3 |
| `width_bucket(op dp, b1 dp, b2 dp, count int)` | int | return the bucket to which operand would be assigned in an equidepth histogram with `count` buckets, in the range `b1` to `b2` | `width_bucket(5.35, 0.024, 10.06, 5)` | 3 |

How About the square root operator!

File: 07.sql

```
select |/25.0;
```

and a factorial operator!

```
select 5!;
```

and

```
select !! 5;
```

That is *FUN* ! Not 1 but 2 factorial operators.
